

Appendix 1: Contracts and Previous Statements Which Require Updating

Negotiated Contracts	Current Status
Telecom NZ: exclusive use of number ranges for the distribution of SMS and MMS messages worldwide	Valid: to date the company has yet to commercialise the distribution of SMS and MMS messages through the agreement
Pak Telecom: exclusive use of Pakistan number ranges for the distribution of SMS and MMS messages worldwide	Enforceability/value is under review; term of initial contract has lapsed; in process of renegotiation
Various miscellaneous agreements with regulators in several other countries for access to number ranges	These smaller agreements are under review, and will require individual renegotiation
ISTV: commercial short code number agreements	Agreements have lapsed; the company will not realise any income from this transaction, however, it maintains a positive working relationship with ISTV
Citic Telecom 1616: agreement for provision of international messaging services	Valid: there have been considerable delays to utilise Citic's ISMS platform; intention is to solidify the relationship and move it forward as a priority
Mobile 365: agreement for provision of international messaging services	Valid: The company's relationship with Mobile 365 remains in place

Previous Company Statements	Current Status
"There are contracts in place that represent over 70% of the number ranges the company is seeking to acquire; by mid-2006, we'll have largely completed the acquisition of these number ranges."	This statement is incorrect; new management have made it their highest priority to negotiate and secure these contracts and number ranges as soon as practicable.
"Negotiations are underway to complete another three hubbing arrangements by mid-2006."	Limited progress has been made with negotiations; the future outcome of these arrangements are at this moment uncertain.
"We have exclusive control of more than 1,000 country codes and national designation codes."	This statement is incorrect. The actual number of exclusively controlled codes is being investigated.
"We own thousands of vanity short codes."	This statement is incorrect. The company currently has access to over 100 vanity short codes which could potentially be commercialised.
