Balance of Payments and International Investment Position: September 2008 quarter

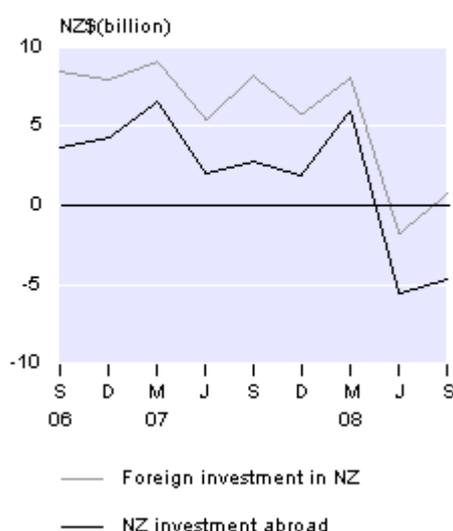

Highlights

- The seasonally adjusted current account deficit was \$4,079 million in the September 2008 quarter, compared with a June 2008 quarter deficit of \$4,650 million.
- For the year ended September 2008, the current account deficit was 8.6 percent of GDP. This compares with a deficit of 8.4 percent of GDP for the year ended June 2008.
- The September 2008 quarter current account deficit was financed by a \$5.4 billion net inflow of financial capital from abroad.
- New Zealand's 30 September 2008 net debtor position of \$165.9 billion was \$7.4 billion (4.7 percent) larger than at 30 June 2008.

Commentary

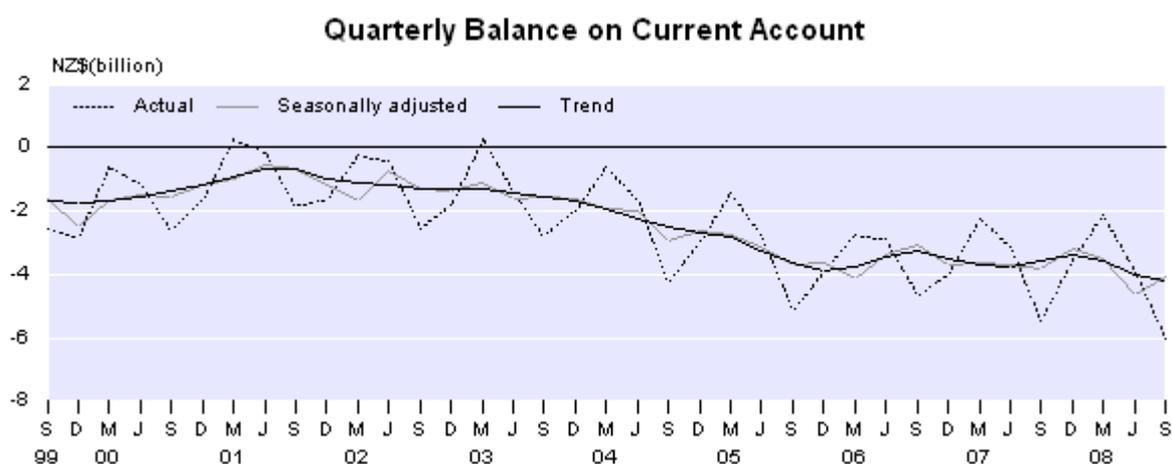

Overview

The seasonally adjusted current account deficit was \$4,079 million in the September 2008 quarter, smaller than the June 2008 quarter deficit of \$4,650 million. The \$571 million narrowing of the deficit in the latest quarter was due to a contraction of the investment income deficit, combined with an increase in the value of exports of goods. The decrease in the investment income deficit was partly offset by an increase in imports of goods and a decrease in exports of services.

The investment income deficit, which is not seasonally adjusted, was \$3,248 million in the September 2008 quarter, \$396 million smaller than in the June 2008 quarter. The decrease in the deficit was driven by a fall in income earned by foreign investors from their shareholdings in New Zealand companies, while income from investment abroad remained relatively stable.

The seasonally adjusted balance on goods in the September 2008 quarter was a deficit of \$898 million. Exports of goods were up \$408 million, and imports were up \$226 million, compared with the June 2008 quarter.

For the year ended September 2008, the current account deficit was \$15,509 million (8.6 percent of GDP). This compares with a deficit of \$14,982 million (8.4 percent of GDP) for the year ended June 2008, and \$14,892 million (8.7 percent of GDP) for the year ended September 2007. Since the year ended September 2007, the goods deficit has decreased \$912 million, while the investment income deficit has increased \$867 million. The balance on services went from a surplus of \$430 million for the year ended September 2007, to a deficit of \$471 million for the year ended September 2008.

The September 2008 quarter current account deficit was financed by a \$5.4 billion net inflow of financial capital. The net inflow comprised a \$4.7 billion withdrawal of New Zealand's assets from abroad, and \$0.8 billion of foreign investment in New Zealand. The withdrawal of foreign assets was driven by the official sector divesting a net \$5.5 billion of reserve assets.

New Zealand's 30 September 2008 net debtor position of \$165.9 billion was \$7.4 billion (4.7 percent) larger than at 30 June 2008. The September quarter saw significant volatility in exchange rates and asset prices. These effects contributed \$2.0 billion to the increase in the net debtor position, arising from the depreciating New Zealand dollar, falling share prices in New Zealand and overseas, and changes in the value of financial derivative contracts.

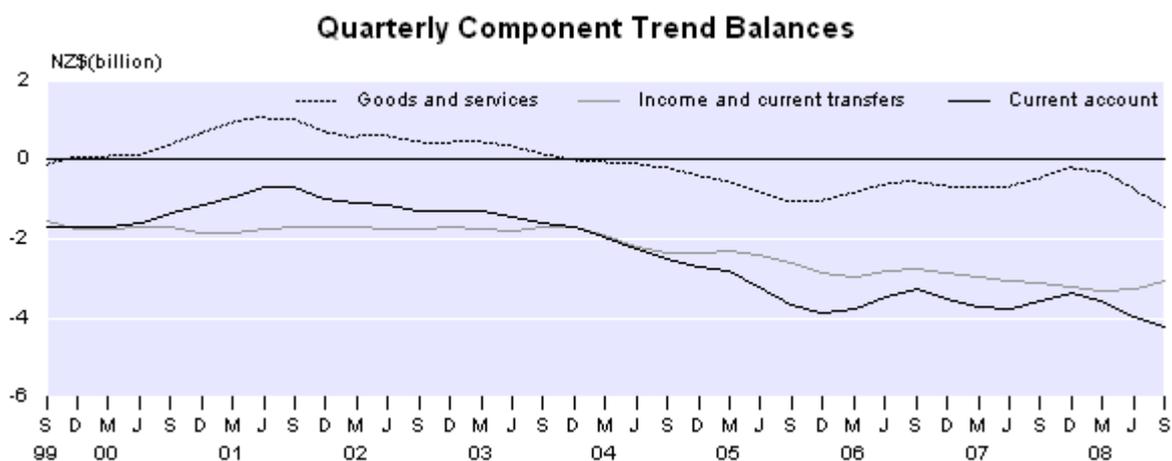

The \$14.8 billion (9.8 percent) rise in New Zealand's net debtor position from 30 September 2007 was driven by a \$18.4 billion rise in net overseas debt, partly offset by a \$3.6 billion fall in the net equity debtor position. Net overseas debt is now \$154.1 billion, representing 85.8 percent of GDP.

Trend

The current account balance trend shows the deficit widening over the past year, to over \$4 billion in the September 2008 quarter. This is mainly due to a widening goods and services balance trend.

The larger goods and services deficit trend value, compared with the December 2007 quarter, is due to increasing imports of goods over this time combined with rising fuel costs. The latest quarter shows the largest goods and services trend deficit for any period.

Partly offsetting the increasing goods and services trend is the income and transfers deficit trend, which has decreased since the June 2008 quarter. However, this remains at over \$3 billion, and has been increasing since the December 2003 quarter.

Goods

All references are to seasonally adjusted figures unless otherwise stated.

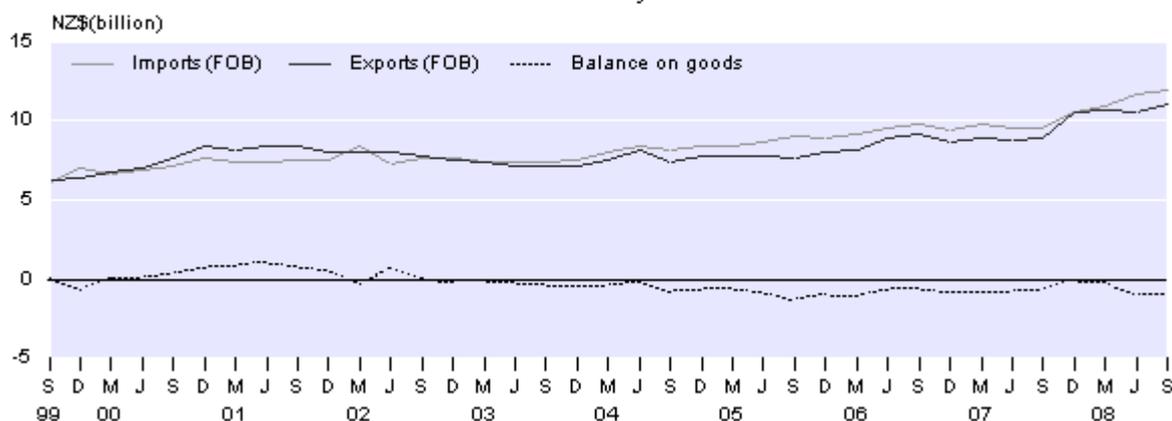

The goods balance was a deficit of \$898 million in the September 2008 quarter, \$180 million smaller than the June 2008 quarter deficit. Exports of goods rose \$408 million between the June 2008 and September 2008 quarters, while imports of goods rose \$226 million.

The increase in the value of exports of goods was the result of higher merchandise export prices in the latest quarter. A rise in the value of forestry products exports was the main driver behind the higher exports figure. Increasing prices for dairy products (up 7.4 percent) also contributed to the higher value for goods exports, but this was partly offset by a fall in volumes. All goods export categories (as listed in the [Overseas Trade Indexes: September 2008 quarter release](#)) recorded price increases this quarter, while volumes were down for all categories except forestry products.

The value of imports of goods was \$11,897 million for the September 2008 quarter, compared with \$11,671 million for the June 2008 quarter. This increase was mainly due to a rise in import prices (up 11.1 percent – the largest quarterly increase since the September 1984 quarter), with higher prices for petroleum and petroleum products (up 31.0 percent) as the main driver. The increase was partly offset by a fall in volumes.

The actual goods balance for the year ended September 2008 was a deficit of \$2,262 million. This deficit was \$912 million smaller than the year ended September 2007 deficit of \$3,174 million. Exports of goods have increased by \$7,621 million over this period, mainly due to higher prices for dairy products. Imports of goods have increased \$6,710 million, driven by petroleum and petroleum product prices.

Seasonally Adjusted Goods Quarterly

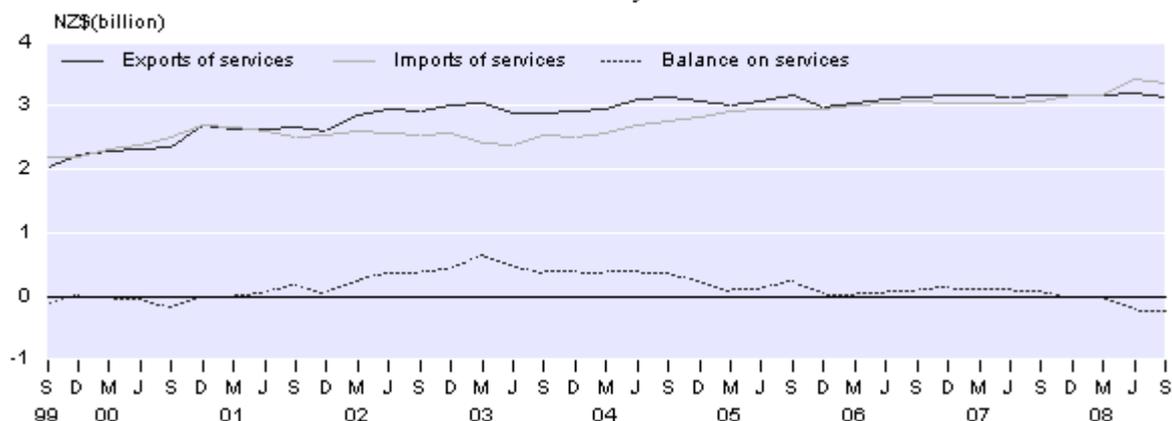

Services

All references are to seasonally adjusted figures unless otherwise stated.

The services balance was a deficit of \$237 million in the September 2008 quarter. This compares with a deficit of \$216 million in the June 2008 quarter and a surplus of \$77 million in the September 2007 quarter. The widening of the services deficit in the latest quarter was due to exports of services decreasing by more than imports of services.

Exports of services fell \$62 million over the quarter, mainly due to a \$111 million decrease in travel services. Exports of travel services measures the expenditure of foreign tourists in New Zealand. The number of visitors to New Zealand increased between the June 2008 and September 2008 quarters, but visitors stayed for shorter periods, and on average spent less per person. Revenue received from other business services, which includes services such as management fees, and agricultural and mining services, also decreased. Other business services are not seasonally adjusted.

Seasonally Adjusted Services Quarterly

The value of imports of services was \$3,367 million this quarter, a decrease of \$42 million from the June 2008 quarter. Expenditure on other business services fell by \$146 million in the September 2008 quarter, due to decreased spending on services related to oil production and exploration. This follows a \$281 million increase in other business services for the previous quarter, which was also driven by services related to oil production and exploration. Partly offsetting the decrease in other business services was a \$43 million rise in transportation services, mainly due to higher prices for freight-related services, driven by the high cost of fuel. Imports of travel services were down \$3 million in the September 2008 quarter, after falling \$25 million in the June 2008 quarter. There were fewer short-term New Zealand resident departures in the latest quarter. This is only the third fall in imports of travel services since the March 2004 quarter.

The year ended September 2008 balance on services was a deficit of \$471 million, compared with a deficit of \$138 million for the year ended June 2008, and a surplus of \$430 million for the year ended September 2007. Prior to the year ended June 2008, the balance on services had not been a deficit since the year ended June 2001. The recent deficits are due to exports of services remaining relatively stable over the last two years, while imports of travel and freight services have increased.

Investment income

The September 2008 quarter investment income deficit of \$3,248 million is \$396 million smaller than the June 2008 quarter deficit. Foreign investors' earnings from their investments in New Zealand were \$362 million lower in the September than the June 2008 quarter, while New Zealand investors' earnings from abroad were up by \$34 million.

Investment income from abroad has remained relatively stable over the last three quarters and was \$770 million for the September 2008 quarter. The rise in income earned from New Zealand's investments abroad this quarter was mainly driven by a \$74 million rise in dividends and interest earned from New Zealand's portfolio investments abroad. This rise was partly offset by falls in earnings from overseas subsidiaries of New Zealand direct investors, and lower interest earned from lending to abroad.

Foreign investors' earnings from their investments in New Zealand were \$4,018 million in the September 2008 quarter, down \$362 million from the June 2008 quarter. The key feature was a fall in income earned by foreign direct investors and portfolio investors from their equity investments in New Zealand companies. Profits earned by foreign direct investors fell by \$152 million and dividends paid to foreign portfolio investors fell by \$109 million.

The year ended September 2008 investment income deficit of \$13.7 billion is \$198 million smaller than the June 2008 year ended deficit. This is the first fall in the year ended investment income deficit since the March 2007 year. New Zealand's earnings from investments abroad fell by \$209 million, and foreign investors' earnings from investments in New Zealand fell by \$407 million. The fall in earnings by foreign investors was driven by a \$340 million fall in profits earned by foreign direct investors and a \$84 million fall in dividends paid to foreign portfolio investors.

The September 2008 year income deficit is \$867 million larger than the September 2007 year ended deficit of \$12.8 billion. A rise of \$992 million in interest on overseas debt was the main contributor, and was related to the rising level of overseas debt.

Current transfers

Current transfers are offsetting entries to transactions where goods or services are supplied or received without there being an exchange of equal value in return, such as taxes or donations. The balance on current transfers was a surplus of \$286 million for the September 2008 quarter, a decrease of \$29 million from the June 2008 quarter surplus.

Current transfers into New Zealand were \$712 million in the September 2008 quarter, a \$68 million increase from the June 2008 quarter. This increase was due to a rise in non-resident withholding tax (NRWT) received. NRWT is payable by foreign investors on their withholding income (such as dividends and interest) received from their investments in New Zealand. There is often a lag between dividends declared and NRWT, as the tax is not due until a month after a dividend is paid.

Current transfers out of New Zealand were \$426 million in the September 2008 quarter, up from \$328 million in the June 2008 quarter. This increase was mainly due to rises in both private and official international aid.

Capital account

The capital account measures the value of assets transferred by migrants into, and out of, New Zealand, as well as the purchase and sale of intangible assets. The capital account balance was a deficit of \$200 million for the September 2008 quarter, a \$41 million narrowing from the June 2008 quarter deficit.

Inflows of capital transfers increased \$4 million in the September 2008 quarter compared with the June 2008 quarter. An increase in the number of permanent and long-term arrivals to New Zealand was partly offset by a fall in the amount of funds invested in New Zealand by migrants. Capital transfers out of New Zealand were down by \$37 million this quarter, due to fewer people emigrating from New Zealand to Australia.

Financial account and international investment position

Financial account (flows)

In the September 2008 quarter, a \$5.4 billion net inflow of capital financed New Zealand's current account deficit. For a second consecutive quarter, the inflow was primarily due to a withdrawal of New Zealand assets from abroad. This withdrawal of \$4.7 billion was added to by \$0.8 billion of foreign investment into New Zealand.

The withdrawal of New Zealand investment from abroad was driven by a net \$5.5 billion divestment of reserve assets by the official sector (Reserve Bank of New Zealand and the New Zealand Treasury). This is the first divestment of reserve assets since the March 2005 quarter. New Zealand fund managers also divested from abroad in the September 2008 quarter, primarily by selling shares in overseas companies. These divestments were partly offset by New Zealand banks investing in overseas-issued debt securities and deposits abroad.

Foreign investment in New Zealand in the September 2008 quarter was driven by foreign direct investment of \$2.3 billion. Of this, \$1.8 billion was net borrowing by New Zealand subsidiaries from their overseas parent companies. In addition, overseas portfolio sharemarket investors bought New Zealand company shares. These investments in New Zealand companies were mostly offset by a \$2.0 billion divestment from New Zealand-issued debt securities, primarily debt securities issued by the New Zealand banking sector and the New Zealand Government.

Reconciling the September 2008 quarter financial account and the international investment position

The reconciliation table below shows both the transaction and non-transaction causes of the shift in the net IIP from the opening and closing net positions for the September 2008 quarter. The term IIP is defined in the technical notes of this publication along with the associated term net debtor position.

Reconciliation statement – September 2008 quarter					
NZ\$(million)					
Net IIP opening at 30 June 2008	Net financial account flows (transactions)	Net exchange rate changes	Net financial derivative valuation changes	Net market price and other valuation changes	Net IIP closing at 30 September 2008
-158,440	-5,404	-2,194	2,401	-2,214	-165,851

At 30 September 2008, the net debtor position was \$165,851 million, an increase of \$7,411 million (4.7 percent) from 30 June 2008. Net transactions increased liabilities by \$5,404 million and net valuation changes added a further \$2,007 million. Valuation changes arise from changes in exchange rates, market prices of assets and liabilities (eg shares), market values of financial derivative contracts, and other changes such as write-offs.

The main causes of the valuation effects in the September 2008 quarter were:

- Global share-price falls. The major sharemarkets in which New Zealand funds are invested fell in value. The effect was to reduce the market value of New Zealand's investments in overseas company shares.
- Large currency movements. The New Zealand dollar (NZD) depreciated against most of the foreign currencies in which New Zealand's foreign assets and liabilities are held. For example, against the United States dollar, the NZD depreciated by 12.4 percent. The depreciation of the NZD increases the NZD value of foreign currency assets and liabilities. At 30 September 2008, New Zealand's foreign currency liabilities exceeded its foreign currency assets. The net effect was an increase in the net debtor position.
- Changes in financial derivative contract values. The effect of changes in exchange rates can be offset by financial derivative contracts. Large exchange rate movements can significantly change the value of such contracts. Comparing the positions at 30 September 2008 and 30 June 2008, a \$2.4 billion rise in the net asset position of financial derivative contracts virtually offset the net effect of exchange rate changes on New Zealand's net debtor position.

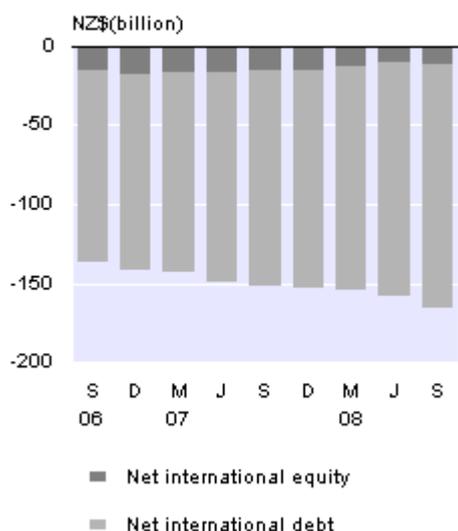

Significant volatility in exchange rates and market values can mean greater difficulty in measuring their impacts, leading to under or overstatement. This may be a contributing factor to the higher-than-usual net errors and omissions (residual) in the September 2008 quarter.

International investment position

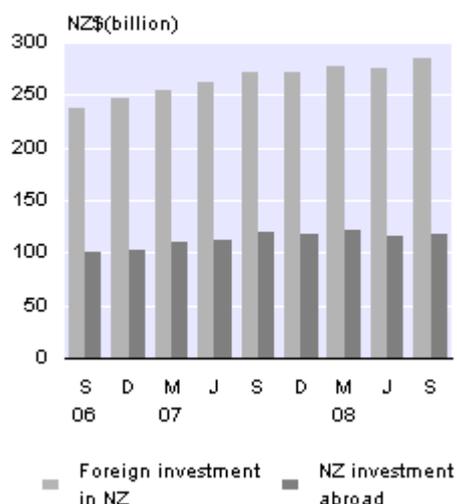

This commentary discusses the presentation of New Zealand's international assets and liabilities as shown in tables 10 to 13 of this release.

At 30 September 2008, New Zealand's net debtor position of \$165.9 billion was composed of \$131.2 billion of international assets and \$297.1 billion of international liabilities. The 30 September 2008 position was \$7.4 billion (4.7 percent) larger than the 30 June 2008 position, and \$14.8 billion (9.8 percent) larger than the 30 September 2007 position.

Net International Debt and Equity
Quarterly

International Investment Position (Stocks)
Quarterly

Since 30 September 2007 the net international debt position has steadily increased and has driven the growth in the net debtor position. Net international debt at 30 September 2008 was \$154.1 billion, up \$6.4 billion from 30 June 2008, and up \$18.4 billion from 30 September 2007. Over this same period the net international equity debtor position has been relatively stable, ranging between \$15.4 and \$10.7 billion.

Of total net international debt, the banking sector held 77.4 percent at 30 September 2008, compared with 79.3 percent at 30 June 2008. The net debt of the corporate sector has remained at about 28 percent of total net debt over the same period. At 30 September 2008, net lending abroad by the general government and monetary authorities sectors combined was \$8.5 billion, down \$2.8 billion from 30 June 2008.

New Zealand's net foreign debt is held in a variety of currencies, including the New Zealand dollar. The proportion of net international debt repayable in foreign currencies has risen. At 30 September 2008, this proportion was 42.2 percent, compared with 37.7 percent at 30 June 2008, and 37.3 percent at 30 September 2007.

Technical notes

Introduction

The conceptual framework used in New Zealand's Balance of Payments (BoP) and International Investment Position (IIP) statistics is based on the fifth edition of the International Monetary Fund's *Balance of Payments Manual* (BPM5). Descriptions of the underlying concepts, data sources and methods used in compiling the estimates are presented in the *Balance of Payments Sources and Methods* report. A printed copy can be obtained from Statistics New Zealand: phone (64) 04 931 4600; fax (64) 04 932 2026; email publications@stats.govt.nz; or download the pdf online at: www.stats.govt.nz/analytical-reports/bop-sources-and-methods-2004-ref-report.htm.

A paper is available online that provides information about, and aids interpretation of, a range of statistics that are of particular relevance during the current period of financial market turmoil [Interpreting selected international financial asset and liability statistics](#).

Balance of payments

New Zealand's BoP statement is a record of the value of New Zealand's transactions in goods, services, income and transfers with the rest of the world, and the changes in New Zealand's financial claims on (assets) and liabilities to the rest of the world. New Zealand's BoP statement comprises the current and capital accounts (which record the value of New Zealand's transactions in goods, services, income and transfers with non-residents) and the financial account (which records financial transactions involving New Zealand's transactions with non-residents).

Series available online

Under the Making More Information Freely Available (MIFA) initiative, a great wealth of series can now be accessed free of charge from the online Infoshare database, available at <http://www.stats.govt.nz/infoshare>.

To access BoP and IIP time series, click on **Browse**, then choose:

Subject category: Economic indicators, then choose: Balance of Payments
The time series can be downloaded in Excel or comma delimited format.

More information about Infoshare can be found on our website at <http://www.stats.govt.nz/about-infoshare>.

Current account

The credit side of the current account shows the export of goods and services, investment income earned and, under current transfers, the offsetting entries to resources received by residents without payment being required.

The debit side shows the import of goods and services, investment income paid and, under current transfers, the offsetting entries to resources supplied to foreign residents without payment being required.

To aid analysis, flows of goods, services, income and current transfers are categorised into major types of transactions. In addition, certain balances are calculated. A 'balance' is the credits less debits for a particular item or group of items. A negative number represents a deficit, while a positive number represents a surplus.

Balances are usually in surplus or deficit; zero balances are unusual. The balances are:

- Balance on goods – goods exports (credits) less goods imports (debits).
- Balance on services – services exports (credits) less services imports (debits).
- Balance on income – income receipts (credits) less income payments (debits).
- Balance on current transfers – current transfer inflows (credits) less current transfer outflows (debits).
- Balance on goods and services – goods and services exports (credits) less goods and services imports (debits).
- Balance on income and current transfers – income and current transfer inflows (credits) less income and current transfer outflows (debits).
- Balance on current account – the sum of the balance on goods and services and the balance on income and current transfers.

Conceptual adjustments to exports and imports of goods

Conceptual adjustments are made to the overseas merchandise trade statistics (sourced from the New Zealand Customs Service) to comply with the BoP convention of recording goods in the current account. In BoP, exports and imports of goods are recorded when ownership of the goods passes from a resident to a non-resident, or vice versa. A change of ownership is said to have occurred when "the two parties (exporter and importer) record the transaction in their books or accounts". For merchandise trade statistics, goods are recorded as exports or imports when they cross a customs frontier.

The following adjustments are made to overseas merchandise trade data to meet BoP recording conventions:

- goods that cross the customs frontier without a change in ownership are removed from imports and exports data – an example of this is large capital items imported or exported on an operational lease
- goods that are sold on consignment are removed from trade data, as no change of ownership has occurred
- freight and insurance charges are removed from the value of imports of goods, and reclassified as services
- adding/subtracting changes in oil stocks abroad.

Exports or imports that do not change ownership are excluded from the overseas merchandise trade statistics to determine the goods component in BoP. This adjustment is reflected under the heading 'BoP conceptual adjustments' in table 4 of this release. An example of such an adjustment is when a large capital item is imported to New Zealand on an operational lease. In such a case, the ownership of the large capital item has not changed, so the value of it needs to be removed from merchandise trade imports data where it was recorded as an import when it crossed the customs frontier.

Goods on consignment are goods that are intended for sale but not actually sold at the time that they cross the border of the exporting country. To meet BoP recording convention, the value of goods exported on consignment is removed from the overseas merchandise trade exports in the quarter they leave the country, then added back into exports in the quarter in which the goods are actually sold (that is, when the change of ownership occurs).

Seasonal adjustment and trend analysis

Quarterly current account statistics are subject to large, short-term movements, both irregular and seasonal, which make the interpretation of trends in the original series difficult.

Seasonally adjusted and trend series help to reveal the underlying behaviour of a series. While seasonally adjusted series have had the seasonal component removed, trend series have had both the seasonal and the irregular components removed. An example of an irregular event is the purchase of a frigate in the December 1999 quarter. Trend estimates reveal the underlying direction of movement in a series and are likely to indicate turning points more accurately than are seasonally adjusted estimates.

The adjusted balance on the current account is the sum of the adjusted goods, services, income and current transfers balances. The smoothed, seasonally adjusted current account balance (the trend) is formed in the same way.

The seasonally adjusted series are produced using the X-12-ARIMA seasonal adjustment package. The trend estimates are based on a five-term Henderson moving average of the seasonally adjusted series, with an adjustment for outlying values.

Towards the end of the series, trend estimates are subject to change, owing to the use of new data points in the estimation process as they become available. The main reason behind this is that the trend is calculated as a 'centred moving average' of the seasonally adjusted series. Seasonally adjusted values are also subject to some revision, as they are also calculated using centred moving average technology. Generally, these revisions are not as great as for the trend.

Revisions can be particularly large if an observation is treated as an outlier in one period, but is found to be part of the underlying movement as further observations are added to the series. All trend estimates are subject to revisions each quarter, but normally only the previous two or three estimates are likely to be substantially altered.

Reporting on an accrual basis

Survey respondents are asked to provide data on an accrual basis (that is, when the service occurs), as opposed to a payments basis (that is, when the payment is actually received/made). However, when it is not possible to separate payments out on an accrual basis, BoP can sometimes receive data relating to multiple periods in one lump sum. Where possible, BoP reallocates the payment to the period in which the service was performed, but irregular movements can still occur in some service categories.

Capital account

The capital account has two components: capital transfers and the acquisition or disposal of non-produced, non-financial assets. Capital transfers involve the transfer of ownership of fixed assets or the transfer of funds linked to them, without any counterpart transaction. Migrants' transfers are an example of a capital transfer.

Financial account

The financial account records financial transactions involving New Zealand claims on (assets) and liabilities to non-residents. The financial account is classified into assets and liabilities, which are broken down by type of investment (direct, portfolio, other investment and reserve assets) and instrument of investment.

Financial account inflows reflect either increases in New Zealand liabilities or decreases in international financial assets. Correspondingly, outflows reflect either increases in New Zealand's international financial assets, or decreases in its international financial liabilities.

Note that the income generated/paid from holding the asset/liability is recorded in the BoP current account component as international investment income.

Net errors and omissions (residual)

BoP statements are compiled using the double-entry bookkeeping system to ensure that the accounts balance in the accounting sense. For example, exports of goods are recorded as credits while payments in exchange for the goods are recorded as debits, denoting either increases in financial assets or decreases in financial liabilities. When goods are supplied as aid to foreign countries with no payment in return, then the goods are included as exports (credits) and an offsetting entry for the value of the goods is made under current transfers (debits).

In practice, the BoP statement does not always balance. In compiling the BoP statement a variety of data sources are used; therefore, some transactions may not be captured and there is a possibility of reporting or compilation errors. To balance the accounts, a balancing item called the 'net errors and omissions' or 'residual' is used. The residual is always entered on the credit side of the account.

The residual can be calculated by one of two means: (1) the sum of all current, capital and financial account credits (inflows), less the sum of all the debits (outflows); or (2) the current account balance, plus the net flow of the capital and financial accounts. A positive entry means that the sum of the debits is greater than the sum of the credits.

Persistent large residuals in one direction (negative or positive) may be taken as an indication of serious and systemic errors. However, a small figure does not necessarily mean that only small errors and omissions have occurred, since large positive and negative errors may be offsetting. Offsetting errors may either be related or unrelated, resulting from a measurement problem affecting both sides or only one side of a transaction. Timing differences in data reported by the different sources used to estimate the credit and debit sides of a transaction may result in positive and negative errors and omissions offsetting each other in successive periods.

The following areas of known financial account undercoverage may contribute to the residual:

- The primary data sources for the financial account and IIP are sample surveys. While a new estimate is made for the non-sampled IIP stock positions each year, no estimate is made for financial account transactions, nor for the associated current account investment income flows.
- Transactions related to managed funds that are not surveyed each quarter. Note that neither the financial account transactions nor current account income are estimated for this item.
- Equity shareholding in overseas companies directly held by New Zealand individuals was estimated at \$10.6 billion at 31 December 2007. Neither financial account transactions nor current account income are estimated for this item.

In any quarter, there may be financial account transactions that, for a number of reasons, are not included in the accounts. Reasons for such undercoverage may include: transactions undertaken by entities that are not in the BoP survey frame; transactions not reported by existing survey respondents; and errors in data reporting and compilation.

The data quality is safeguarded by undertaking regular assurance checks including:

- comparing Reserve Bank of New Zealand (RBNZ) and IIP banking sector data
- monitoring investment activity approved by the Overseas Investment Office
- reconciling changes in stock position of inwards and outwards investment against financial account transactions, reporting changes due to exchange rate movements, changes in the valuation of assets and liabilities, and other changes such as reclassification between components
- monitoring media reports of business activities relevant to the BoP and IIP
- annually reviewing the survey populations, with additions made at any time during the year where warranted
- editing and validating data received from survey respondents – this process often involves consulting survey respondents, particularly in respect of large and complex transactions.

Data confidentiality

Where data within a table in this release discloses information about an individual respondent, or would allow close estimation of such information, data has been published only after obtaining the consent of those respondents (that is, published under section 37(4)(a) of the Statistics Act 1975). Where affected respondents have not provided their consent, data remains confidential.

Data sources

The source data and information for BoP and IIP statistics that are collected and processed each quarter include:

- Surveys of New Zealand resident enterprises conducted by Statistics NZ. These surveys operate with the approval of the Minister of Statistics and their completion is therefore a compulsory requirement as set out in the Statistics Act 1975. These surveys are directed at New Zealand-resident enterprises that have been identified as being relevant to BoP and IIP statistics.
- Surveys conducted by other entities. Some of the data used is purchased by Statistics NZ from other organisations that operate an appropriate survey. Statistics NZ has input into the design of these surveys. One example is the International Visitors Survey operated by a marketing company for the Ministry of Tourism (which supplies quarterly data used in the measure of exports of travel services in the current account). Another example is the Quarterly Managed Funds Survey (QMFS). This is a joint RBNZ and Statistics NZ operation, which supplies data for the current account component of income (credit), and the financial account and IIP components of portfolio investment, financial derivatives and other investment (assets).
- Administrative data, for example non-resident withholding tax data from Inland Revenue and New Zealand Customs Service records of imports and exports, published by Statistics NZ each month as overseas merchandise trade statistics.
- Financial market information, including interest and exchange rates and share prices. Much of this information is taken from publicly available information sites.

Balance of Payments Quality Plan

Work is continuing on issues identified in the 2004 *Balance of Payments Quality Plan* document. The plan was developed in response to potential weaknesses in BoP data sources, methods and processes.

The current BoP data quality projects underway include:

- coverage and collection of BoP data as a result of offshoring activities of New Zealand companies
- update to the methodology for the individual holdings of assets abroad.

Offshoring activity

Statistics NZ has started a project to investigate the coverage and collection of BoP data on the offshoring activities of New Zealand companies. This project has three stages. The initial stage is almost complete. It involves producing an information paper on the knowledge gained on the offshoring activity to date. The second stage involves investigating data coverage and collection issues and making recommendations for improvements. The final stage will involve implementing the recommendations identified in stage two.

Individual holdings of assets abroad

The tasks completed to date include:

- discussing the project outcomes with other government and non-government organisations that have an interest in it
- identifying the various paths chosen by individuals in New Zealand to invest abroad and the mechanisms currently in place to collect data on these investments
- identifying a number of options for collecting data where no current collection mechanisms exist.

This project is progressing more slowly than expected as staff have been concentrating on the production of quarterly statistics. Issues identified in this project link with work that Statistics NZ and the RBNZ are doing to improve the coverage and quality of data about securities issued by non-residents and held by residents. A related topic is debt securities issued in New Zealand by overseas residents (Kauri bonds), and is discussed later in these technical notes.

International investment position

The IIP measures the stock (or level) of New Zealand's financial assets and liabilities with the rest of the world at a particular point in time. It comprises New Zealand's net international debt (lending to non-residents less borrowing from non-residents) and net international equity investment (investment in shares abroad less foreign investment in New Zealand company shares). A net international debtor position means that international liabilities exceed international assets.

The BoP and IIP statistics are closely related, with the former measuring transaction flows and the latter measuring stock positions. The difference in the level of international financial assets and liabilities between two points in time is due to: (1) the BoP financial account transactions; and (2) the other (non-transactional) changes that occur during the period. Examples of the latter are revaluations, changes in market prices, changes in exchange rates, and other changes such as write-offs.

Exchange rate and share index movements: September 2008 quarter

A comparison of the exchange rates at 30 September 2008 and 30 June 2008 showed that the New Zealand dollar depreciated against all the major currencies except the Australian dollar. A depreciation of the New Zealand dollar increases the New Zealand dollar value of foreign currency assets and liabilities within the IIP, whereas an appreciation of the New Zealand dollar has the opposite effect. The exchange rate impacts varied this quarter depending on the timing of transactions. For example, while the Australian dollar to New Zealand dollar was 0.7952 at the start of the quarter and 0.8373 at the end of the quarter, the RBNZ daily rates tables show that it reached a minimum of 0.7749 on 24 July 2008 and a maximum of 0.8400 on 19 September 2008.

All major sharemarket indexes decreased over the period from 30 June to 30 September 2008. The value of foreign investors' New Zealand shares, as well as New Zealand investors' overseas shareholdings, decreased with a falling share index.

Presentation of international investment position statistics

There are two ways of presenting IIP statistics: the BoP presentation and the balance sheet presentation. While total assets and liabilities differ in each, the net IIP result is identical, regardless of the method used.

Balance of payments presentation

The BoP presentation of New Zealand's IIP classifies investment by the relationship between the investor and the investment enterprise. This approach presents New Zealand's investment abroad (assets) by direct investment, portfolio investment, other investment, financial derivatives and reserve assets. Foreign investment in New Zealand (liabilities) is classified in the same way, except for reserve assets, which are not applicable. The BoP approach is the one recommended by the International Monetary Fund (IMF).

Balance sheet presentation

This approach uses a balance sheet format to present New Zealand's international assets and liabilities. The use of the balance sheet format enables presentation of assets and liabilities disaggregated into:

- gross and net equity positions, overseas debt (borrowing), lending abroad, and net overseas debt (table 10)
- borrowing and lending disaggregated by broad sector (table 10), by instrument type (table 11), by currency in which the obligations are repayable (table 12), and by residual maturity (table 13).

The relationship between the two presentations

Although there are differences in the classification of some transactions between the balance sheet and the BoP presentation, it is still possible to reconcile some items. The equity positions in the BoP presentation for New Zealand investment abroad sum to the equity figure under international assets in the balance sheet presentation. Similarly, the equity positions in the BoP presentation for foreign investment in New Zealand sum to the equity figure under international liabilities in the balance sheet presentation. Reserve assets are treated the same way in both presentations.

Lending and borrowing in the balance sheet and BoP presentations are treated differently and will not reconcile. All lending in the balance sheet presentation is treated as an asset and all borrowing treated as a liability. In the BoP presentation for New Zealand investment abroad, net lending by New Zealand enterprises is reported, and for foreign investment in New Zealand, net borrowing by New Zealand subsidiaries is reported.

In the BoP presentation, net lending refers to the total lending by New Zealand parent enterprises to their overseas subsidiaries, less any borrowing by New Zealand parent enterprises from their overseas subsidiaries. Net borrowing refers to the total borrowing by New Zealand subsidiaries from their overseas parent enterprise, less any lending by New Zealand subsidiaries to their overseas parent.

As the BoP presentation treats some borrowing as negative lending and some lending as negative borrowing, the values of lending and borrowing reported in the BoP presentation will not reconcile with those in the balance sheet presentation. For example, prepaid inter-company accounts with overseas parent enterprises are viewed as lending using the balance sheet presentation, but as negative borrowing using the BoP presentation.

International debt and external debt statistics

As described above, net international debt comprises lending to non-residents less borrowing from non-residents. Debt is an actual current contractual obligation that requires payment of principal and/or interest by the debtor at some point(s) in the future. Conversely, equity ownership represents a claim over the residual value of an enterprise.

Table 10 of the BoP and IIP release presents New Zealand's international balance sheet position, which New Zealand's international debt contributes to. In table 10, gross international debt is termed 'borrowing'. Statistics NZ's measurement of international borrowing differs from the IMF's measure of external debt as set out in their *External Debt Guide* (2003). The difference lies in the treatment of financial derivative liability positions. The *External Debt Guide* excludes these positions; whereas in table 10, measures of international lending, borrowing and net international debt include these positions.

The IMF's *External Debt Guide* excludes financial derivative asset and liability positions because no principal is required to be repaid and interest is not accrued. An overdue obligation to settle a financial derivative contract is treated in both the IMF's guide and the table 10 series, like any arrears, as a debt liability because payment is required.

New Zealand's external debt, lending, and net external debt can be derived from the data presented in table 11. This table presents New Zealand's international financial assets and liabilities disaggregated by instrument type, where financial assets and liabilities equate to international lending and borrowing, respectively, in table 10. Deriving external debt and external lending is done using table 11 data by deducting from each of total international assets (IIPQ.S5AA3) and liabilities (IIPQ.S5AL3) the value of financial derivative asset (IIPQ.S5AA6F) and liability (IIPQ.S5AL6F) positions, respectively; and using the adjusted totals of international financial assets (external lending) and liabilities (external debt) to calculate net external debt.

The table below derives the net external debt position from table 11 data and compares it with the net international debt position of table 10.

Calculating New Zealand's net external debt			
Period	30 September 2007	30 June 2008	30 September 2008
	NZ(\$)million		
Total international financial lending IIPQ.S5AA3	75,790	77,791	80,944
less financial derivatives IIPQ.S5AA6F	10,625	9,519	14,357
External lending	65,165	68,272	66,587
Total international borrowing IIPQ.S5AL3	211,534	225,529	235,039
less financial derivatives IIPQ.S5AL6F	10,731	9,207	12,023
External debt	200,803	216,322	223,016
Net external debt	-135,638	-148,050	-156,429
Net international debt IIPQ.S5AA2B	-135,744	-147,738	-154,094
Difference; net external debt less net international debt	106	-312	-2,335

Debt securities issued in New Zealand by overseas resident issuers (Kauri bonds)

Kauri bonds are debt securities issued in New Zealand, in New Zealand dollars, by non-resident issuers. In accordance with BoP compilation principles, if a New Zealand-resident investor holds such bonds, then the resident holder has a claim over the non-resident issuer. These holdings contribute to New Zealand investment abroad (international assets). When Kauri bonds are held by non-residents, then they are neither assets nor liabilities of New Zealand; they are a claim by the non-resident holder over the non-resident issuer. The Australian Bureau of Statistics (ABS) has adopted the same treatment in respect to Kangaroo bonds (that is, debt securities issued in Australia by non-residents).

When reporting to surveys that collect data for the international accounts, some respondents have treated their investments in Kauri bonds as investment in New Zealand, leading to under-measurement of international assets and associated income in the statistics. This misreporting arises because these bonds are issued in New Zealand and denominated in New Zealand dollars, and are therefore often interpreted by respondents as not relevant to the international investment surveys.

After consultation, a number of respondents to international investment surveys now report their holdings of Kauri bonds as investment abroad in their surveys, along with the associated income. This data is incorporated into the statistics effective from the December 2007 quarter. In addition, an estimate of Kauri bonds acquired by the New Zealand household sector in the December 2007 quarter has been included in the BoP financial account transactions and the IIP as investment abroad. The estimate of resident households investment in Kauri bonds is held constant from quarter to quarter, and the sectoral classification is to 'other sectors' (table 10). Income earned from the investment is estimated using published rates of return, and is included in: income from New Zealand investment abroad, portfolio investment income, income on debt, bonds and notes (table 6). The estimates are subject to change in the expectation that further work leads to improved data.

Holdings of Kauri bonds by New Zealand residents included in the statistics as investment abroad are estimated to understate residents' total holdings by approximately \$3.0 billion as at 30 September 2008 (2.6 percent of total New Zealand investment abroad, table 2). This conclusion is drawn from comparing estimates of Kauri bond assets included in the international investment position statistics with information about Kauri bonds obtained primarily from RBNZ published data, and from other published sources. Further work aimed at improving data about the issuance and holding of Kauri bonds is underway. This includes work being done in conjunction with the RBNZ.

RBNZ securities subject to repurchase agreements

Non-resident issued debt securities, denominated in foreign currencies and held by the RBNZ, contribute to New Zealand's official sector reserve assets. When such a security is subject to a repurchase (repo) agreement, it remains in the IIP as an asset, but not as a reserve asset. The appropriate IIP classification is: New Zealand investment abroad; portfolio investment; debt securities (as opposed to investment abroad; reserve assets). The cash received for the 'repoed' security is recorded as a liability in the IIP as: foreign investment in New Zealand: other investment; loans. This is the collateralised loan approach to recording repoed securities. However, in the IIP, the repoed security is misclassified to New Zealand investment abroad; other investment; other instruments (instead of to portfolio investment); debt securities. The work to correctly classify the securities involved was expected to be implemented with the release of June 2008 quarter statistics in September 2008. However, it has not been possible to complete the work in time for the September 2008 release. We now expect the necessary changes to be implemented in the release of June 2009 quarter statistics in September 2009.

Undercoverage estimate for the international investment position

The data sources for BoP financial account and IIP statistics are a set of surveys. The main survey is the QIIS. Other sources include: the Treasury and RBNZ, surveyed directly each quarter; a quarterly survey of New Zealand resident nominees; and the Quarterly Managed Funds Survey (QMFS), which is a joint RBNZ/Statistics NZ collection. For further information about the BoP financial account and IIP data sources, refer to chapter 11 of the *Balance of Payments Sources and Methods*, available at: www.stats.govt.nz.

The QIIS, Quarterly Nominees and QMFS are all sample surveys. Estimates for non-surveyed enterprises (undercoverage estimates) are determined each year for the QIIS and incorporated into the published accounts. No estimate is made for survey undercoverage in respect of the Quarterly Nominees Survey (which supplies data on foreign portfolio equity investment in New Zealand via resident nominees). The QMFS is a sample of principal New Zealand fund managers. No estimate for QMFS undercoverage is currently included in the published tables. However, smaller fund managers are surveyed annually, and estimates of their funds under management are presented in the footnotes to the tables covering international assets and liabilities.

The QIIS is a quarterly sample of approximately 500 enterprises. The sample is intended to capture approximately 95 percent of the stock levels of the main IIP components.

The amount by which the quarterly sample survey is estimated to undercover the population is derived from the Annual International Investment Survey (AIIS). The AIIS survey collects data as at 31 March each year from a population of enterprises identified as being relevant to the BoP financial account and the IIP, but not surveyed in the QIIS. The AIIS is intended to be a census survey every three years and a sample survey in the interim years. The results of the AIIS are used to:

- (i) Provide IIP (table 2) and international asset and liability (tables 10 to 13) positions to supplement the regular quarterly sample survey (QIIS). This estimate is known as the non-sampled estimate (NSE) and is added to the results of each quarter's QIIS results and included in the published accounts. The QIIS and NSE estimates of investment positions are New Zealand's measured international investment positions.
- (ii) Update the sample used in the regular quarterly sample survey (QIIS). To reduce the compliance load faced by the smaller businesses that typically constitute the AIIS population, the AIIS questionnaire is an abbreviated form of the QIIS questionnaire.

Note that in respect of NSE investment positions, the associated current account investment income flows and financial account transactions are neither collected nor estimated.

Currency and maturity breakdowns of the non-sampled estimate

To improve the usefulness of the assets and liabilities data, Statistics NZ has allocated the NSE across the different currency and residual maturity profiles. For each period's investment positions, the NSE has been allocated across the various profiles using that period's QIIS data collected from non-bank enterprises. The assumption is that the behaviour of the NSE data is similar to that of the non-bank enterprises surveyed in the QIIS. The resulting apportionment of NSE estimates is then added to the QIIS residual maturity and currency totals.

Review of sample of fund managers, and level shift in investment abroad

The sample of fund managers surveyed each quarter has been reviewed. The changes made have resulted in a level shift up in the measured level of funds under management abroad. This level shift is approximately \$1.4 billion, effective in the December 2007 quarter. The Annual Managed Funds Survey (AMFS) data estimate of funds invested abroad through smaller fund managers, previously updated at 31 December 2006, has now been updated for 31 December 2007. The 2007 results were included in the release of March 2008 quarter BoP and IIP statistics in June 2008. This data is presented as footnotes to tables 2, 10, 11, 12 and 13 of this release.

Annual Managed Funds Survey

The AMFS is conducted jointly by the RBNZ and Statistics NZ and has collected data at 31 December since 2001. The AMFS measures the stock of investment held (both in New Zealand and abroad) by fund managers who are not in the QMFS.

The results from the sample surveys showed assets held abroad of:

Results from the AMFS	
Period	Assets held abroad NZ\$(million)
December 2007	3,657
December 2006	4,315 (R)
December 2005	3,225
December 2004	1,036
December 2003	897
December 2002	2,187
December 2001	2,365

Symbol:
R^{*} revised

The AMFS does not capture any financial account transaction flow or current account investment income data. This data is not included in the IIP series of New Zealand investment abroad. The data from the AMFS for portfolio investment abroad is shown in the IIP tables of this release as an addendum item. The data is as at 31 December only.

The December 2003 and December 2002 data presented above are not comparable, as the large fund managers reporting in the 2002 AMFS were added to the QMFS from the beginning of the March 2003 quarter. In the December 2003 period, the largest of the annually surveyed fund managers were incorporated into the QMFS and from that point the data relating to those enterprises was included in the IIP series.

A review of the survey's results and an investigation into the feasibility of adjusting the data (to take account of market price and exchange rate movements) are planned, before the data series is formally migrated into the New Zealand IIP statistics. For further information on the AMFS, contact Salendra Kumar on 04 931 4600 or email: bop.surveys@stats.govt.nz.

Equity shareholding in overseas companies directly held by New Zealand individuals

Many New Zealand individuals invest directly abroad and hold these overseas assets in their own custody or in the custody of an overseas entity. Only data relating to overseas financial assets of New Zealand enterprises, and those held by New Zealand individuals and organisations where the investments are undertaken by New Zealand fund managers, are reported in the BoP and IIP statistics. To cover the gap (that is, between assets invested and held directly), Statistics NZ has made estimates of the level of individuals' directly-held overseas equities. The estimates are presented as an addendum item in the IIP (table 2). This is because the estimation methodology relies on several key assumptions that cannot, at this stage, be fully tested by reference to available data. Changes to these assumptions can significantly alter the size of the estimate.

Equity shareholding in overseas companies directly held by New Zealand individuals			
Period	Latest estimate	Previously published	Amount held in Australia
NZ\$(billion)			
December 2007	10.6	..	8.8
December 2006	7.8	..	6.2
December 2005	6.4	4.5	5.1
December 2004	5.2	5.2	4.0

Symbol:

.. data unavailable

International trade in carbon emissions units

The classification and treatment of emission units is still under discussion in international accounting and statistical forums. In compiling BoP and IIP statistics, Statistics NZ regards emission units as intangible non-produced assets. Therefore, international trade in these units is recorded in the capital account of the BoP. For example, the sale of emission units by a resident to a non-resident is recorded as a capital account receipt.

(1) Data may not sum to stated totals due to rounding.

(2) Annual Managed Funds Survey data estimate of funds invested abroad through smaller fund managers was \$3.7 billion at 31 December 2007. This and the estimates for earlier periods are not included in this table. Refer to the technical notes of this release.

(3) Statistics New Zealand has updated its estimates of the value of overseas shares held directly by New Zealand individuals. The estimate at 31 December 2007 is \$10.6 billion. This and the estimates for earlier periods are not included in this table. Refer to the technical notes of this release.
