

Overseas Merchandise Trade: July 2011

Embargoed until 10:45am – 24 August 2011

Highlights

For the month of July 2011 compared with July 2010:

- Merchandise exports were up \$166 million (4.7 percent) to \$3.7 billion.
- Milk powder, butter, and cheese had the largest increase, up \$72 million.
- Merchandise imports were down \$149 million (4.0 percent) to \$3.6 billion.
- The decrease in imports was led by petroleum and products, down \$97 million.
- There was a trade surplus of \$129 million – the first July surplus since 1991.
- The trend for exports has increased 30 percent since the most recent low point in October 2009 and continues to reach new highs.
- The trend for imports has increased 20 percent since the most recent low point in September 2009, but is still 9.9 percent below its overall peak in September 2008.

Commentary

Exports up 4.7 percent in July 2011

In the July 2011 month, merchandise exports were valued at \$3.7 billion, up \$166 million (4.7 percent) from July 2010.

Milk powder, butter, and cheese exports increase \$72 million

The rise in exports was led by the milk powder, butter, and cheese commodity group.

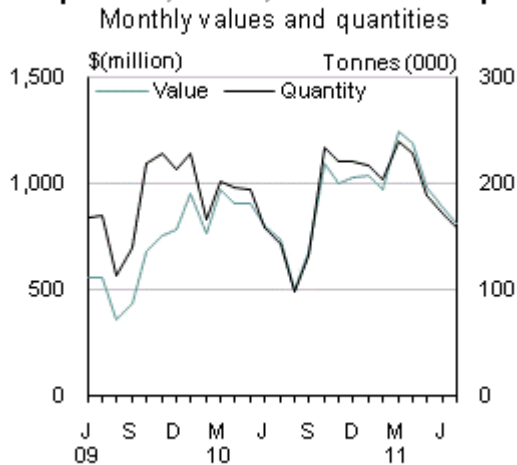

The value of milk powder, butter, and cheese exports rose 9.8 percent in July 2011 compared with July 2010, led by anhydrous milk fat. Unsweetened whole milk powder and natural milk constituents were also significant contributors.

Other key changes for commodity export values

In July 2011, compared with July 2010, the value of exports of:

- Crude oil rose \$39 million (22 percent), with prices nearly 30 percent higher.
- Mechanical machinery and equipment rose \$23 million (16 percent), led by refrigeration equipment for storage and display.
- Ships, boats, and floating structures had the largest decrease, down \$42 million (67 percent), led by a decrease in pleasure yachts. The values of exports in this category tend to be irregular.

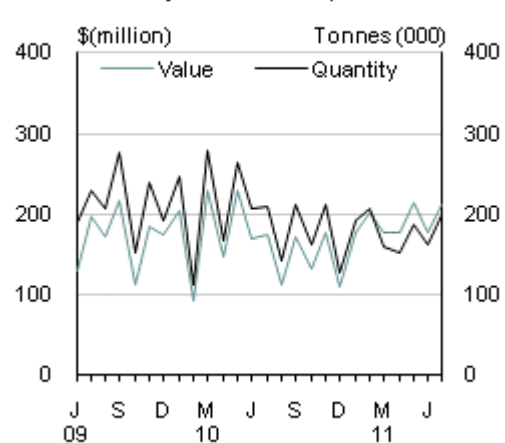

Milk powder, butter, and cheese exports

Crude oil exports

Monthly values and quantities

Source: StatisticsNewZealand

By country of destination, the value of exports in July 2011, compared with July 2010, rose (in order of significance) for:

- Australia, up \$71 million (8.5 percent), led by crude oil, up \$56 million. Refrigeration equipment for storage and display was also a significant contributor.
- India, up \$60 million, more than double the value in July 2010.
- Japan, up \$27 million (9.7 percent). This was mainly due to increases in the following commodity categories: wood pulp and waste paper; milk powder, butter, and cheese; and aluminium and aluminium articles.
- Venezuela, up \$22 million, three times the July 2010 value, led by unsweetened whole milk powder.

Italy recorded the largest decrease, down \$46 million, less than half the July 2010 value. This fall was due to pleasure yachts exported to Italy in July 2010, with none exported in July 2011.

Imports down 4.0 percent in July 2011

In the month of July 2011, merchandise imports were valued at \$3.6 billion, down \$149 million (4.0 percent) from July 2010.

Of the three main broad economic categories, intermediate goods and consumption goods decreased in value in July 2011 compared with July 2010, while capital goods increased in value.

Intermediate goods recorded the largest decrease, down \$147 million (8.0 percent). The decrease was led by:

- Processed industrial supplies (down \$88 million) over a range of commodities, with potassium fertiliser recording the largest decrease.
- Processed fuel and lubricants other than motor spirit (down \$50 million).
- Crude oil, which has shown large increases in recent months, had a small decrease of \$9.5 million (2.4 percent). Quantities, however, were much lower, down 21 percent. (Crude oil is imported in large, irregular shipments, which can cause large percentage fluctuations in the series.)
- These falls were partly offset by a \$30 million rise in parts and accessories of transport equipment.

Consumption goods decreased \$59 million (6.3 percent) across most sub-categories.

Capital goods increased \$100 million (18 percent) due to an increase in machinery and plant, up \$72 million (14 percent), led by portable computers and electrical transformers. Transport equipment also increased, up \$29 million (41 percent).

In other categories, the largest changes were in petrol and avgas, and passenger motor cars:

- Petrol and avgas decreased \$28 million (22 percent).
- Passenger motor cars decreased \$19 million (8.3 percent).

By commodity group, the value of imports in July 2011, compared with July 2010, fell (in order of significance) for:

- Petroleum and products, down \$97 million (14 percent). The decrease was led by regular motor spirit, down \$39 million (43 percent) and automotive diesel, down \$33 million (32 percent).
- Iron and steel, and articles, down \$25 million (21 percent), across a range of commodities.
- Pharmaceutical products, down \$17 million (17 percent), across a range of commodities.
- Sugars and sugar confectionery, down \$15 million (43 percent), led by a decrease in raw cane sugar (down \$21 million). This was partly offset by an increase in lactose and lactose syrup (up \$9.5 million).

Electrical machinery and equipment had the largest increase, up \$49 million (15 percent), across a range of commodities, led by electrical transformers and mobile phones.

By country of origin, the value of imports in July 2011, compared with July 2010, fell (in order of significance) for:

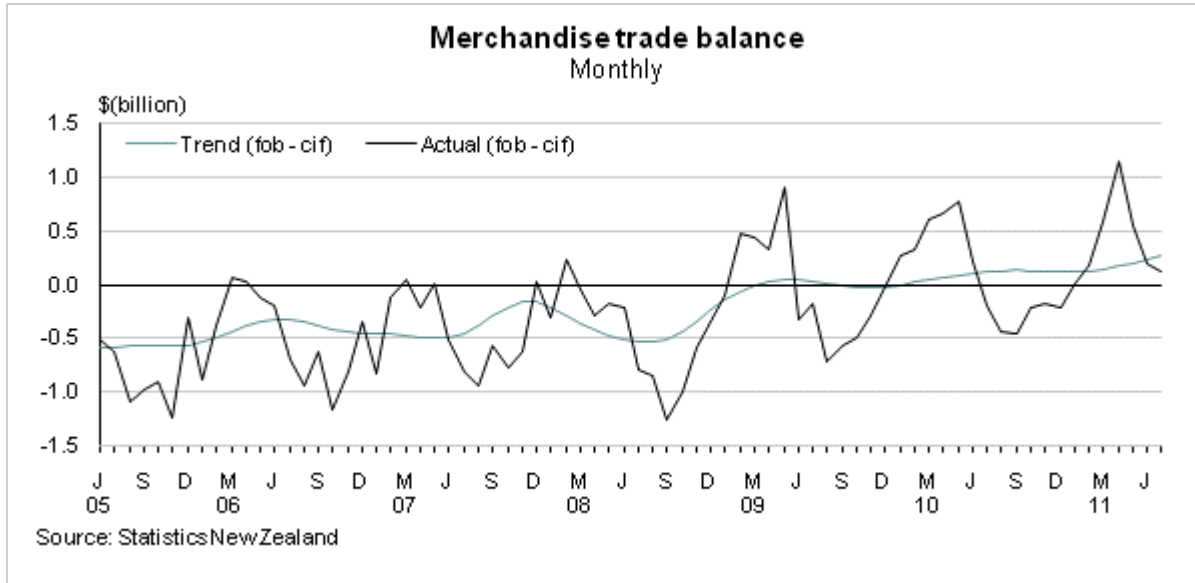

- Japan, down \$110 million (34 percent), led by automotive diesel, down \$79 million. New and used petrol motor cars with an engine capacity of 1500–3000cc also fell.
- Brunei, down \$89 million (69 percent), due to crude oil imports. Crude oil import shipments tend to fluctuate by country of origin, which gives rise to large changes in quantities and values.
- Australia, down \$36 million (5.7 percent). This was led by petroleum and products, down \$27 million (83 percent) and sugars and sugar confectionery, down \$22 million (77 percent), led by raw cane sugar.

By country of origin, the value of imports in July 2011, compared with July 2010, rose (in order of significance) for:

- Russia, up \$76 million, due mainly to crude oil imports. This was almost double the July 2010 value.
- The Republic of Korea, up \$35 million (30 percent), across a range of commodities.

First July trade surplus since 1991

In July 2011, the trade balance was a surplus of \$129 million, or 3.5 percent of the value of exports. This is the first July surplus since 1991 and compares with an average July deficit of 18 percent of the export value over the previous five years.

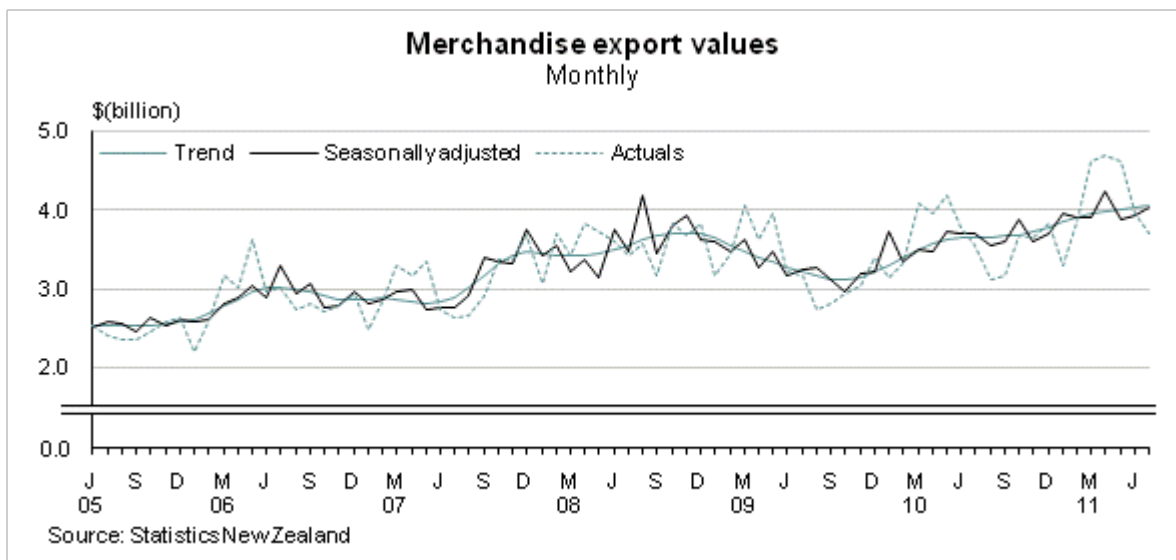

The annual trade balance for the year ended July 2011 was a surplus of \$1.3 billion (2.8 percent of exports). This compares with an average deficit of 11 percent of exports over the preceding five July years, although there was a surplus in the July 2010 year.

Seasonally adjusted exports up on previous month

After adjusting for seasonal effects, the total value of exports increased 2.4 percent (\$95 million) in July 2011, following an increase of 1.0 percent in June 2011.

Total exports excluding crude oil increased by 2.2 percent (\$84 million).

Although exports rose overall on a seasonally adjusted basis, most of the larger commodity groups fell in July 2011. Seasonally adjusted movements in the value of leading export commodity groupings in July 2011, compared with June 2011:

- Milk powder, butter, and cheese exports decreased 3.7 percent (\$38 million), following a 13 percent increase in June. Quantities also fell 3.0 percent in July 2011.
- Meat and edible offal decreased 14 percent (\$67 million), following falls in May and June. Quantities fell 6.4 percent in July 2011.
- Logs, wood, and wood articles fell 4.8 percent (\$12 million), following a fall of 9.9 percent in June.
- Crude oil increased 19 percent (\$34 million), and aluminium, and aluminium articles increased 21 percent (\$19 million). Both of these commodity groupings are not seasonally adjusted because they do not have a stable seasonal pattern.
- Mechanical machinery and equipment increased 10 percent (\$15 million), following a 13 percent decrease in June.

Trend in export values continues to reach new highs

The trend in export values has increased 30 percent (\$929 million) since its most recent low point in October 2009, and continues to reach new highs.

Export trend by commodity group since October 2009

Milk powder, butter, and cheese have contributed over 40 percent of the increase in the export values trend since October 2009, up 65 percent (\$392 million). This increase was price-driven with quantities at a similar level to October 2009.

Logs, wood, and wood articles are 39 percent higher (\$80 million), with quantities 30 percent higher.

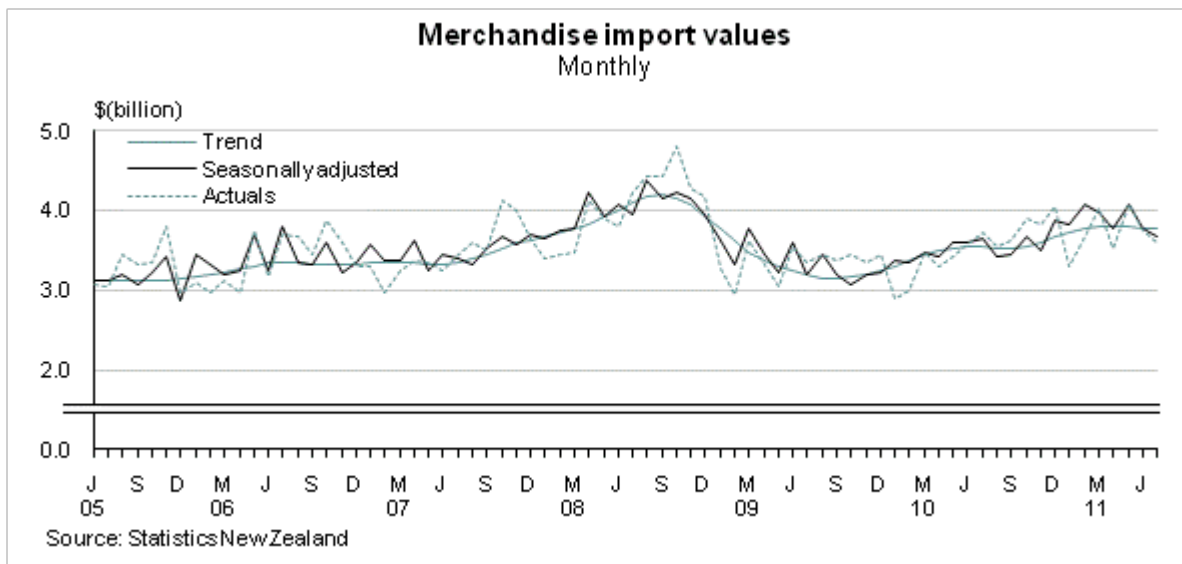

Meat and edible offal values are 19 percent higher (\$77 million), although quantities are 6.7 percent lower compared with October 2009.

Seasonally adjusted imports fall

After adjusting for seasonal effects, the total value of imports decreased 2.2 percent (\$83 million) in July 2011, following a 7.7 percent decrease in June 2011 and a 7.8 percent increase in May 2011.

Total imports excluding petroleum and products decreased 0.6 percent (\$19 million).

Trend in import values flattening

The trend for import values (excluding one-off capital items) is up 20 percent (\$635 million) since its most recent low point in September 2009, but is still 9.9 percent below its overall peak in September 2008. The trend had been mainly increasing since September 2009, but appears to

have been flattening since March 2011.

Excluding petroleum and products, and one-off capital items, the trend for imports has been mainly increasing since September 2009 (up 17 percent) although it is still 7.9 percent lower than September 2008.

Import trend by commodity group since September 2009

Petroleum and products, the largest import category (see table 6), has increased in value by more than one-third since September 2009. This import category does not have stable seasonality and so cannot be calculated separately. However, the change in this category can be inferred by comparing the trend in total imports with imports excluding petroleum and products.

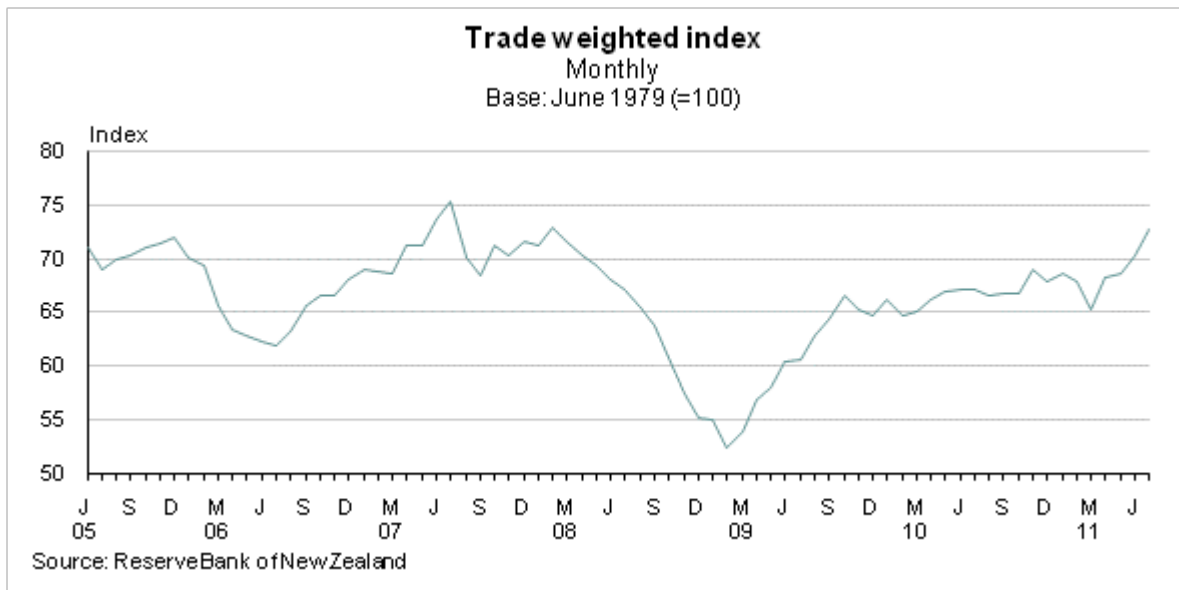

Mechanical machinery and equipment, the second-largest import category, has increased 20 percent since September 2009. Growth in this series was strong in mid-2010, but appears to have flattened since October 2010.

Electrical machinery and equipment, the fourth-largest import category, has increased 12 percent. Following decreases in 2009, the trend increased strongly throughout 2010 and has continued to grow steadily during 2011.

Iron and steel, and articles has increased 39 percent since September 2009. The trend showed strong growth since November 2010 but appears to be flattening, although more data points are required to confirm this.

Exchange rate movements

According to the Reserve Bank's Trade Weighted Index, the New Zealand dollar was 3.4 percent higher in July 2011 compared with June 2011, and 8.2 percent higher compared with July 2010.

Updates to previous statistics

Provisional values published on 26 July 2011 have been updated. Merchandise trade statistics for the latest three months are provisional to allow for the inclusion of late data and amendments.

Overseas Merchandise Trade: August 2011 will be released on 26 September 2011.

Technical notes

Definitions

billion	1,000 million.
capital goods	Produced assets used repeatedly or continuously, for longer than one year, in industrial production processes. Examples are machinery, trucks, and aircraft.
cif	Cost of goods, including insurance and freight to New Zealand.
consumption goods	Goods used (without further transformation in industrial production processes) by households, government, or non-profit institutions serving households.
fob	Free on board (the value of goods at New Zealand ports before export).
Infoshare	Free-of-charge online tool that gives you access to a range of time-series data.
intermediate goods	Goods used up or transformed in industrial production processes.
merchandise trade	Exports or imports of goods that alter the nation's stock of material resources. Includes goods leased for a year or more. Excludes goods for repair.
provisional	Statistics for the latest three months are provisional, to allow for the inclusion of late data and amendments.
re-exports	Merchandise exports that were earlier imported into New Zealand and comprise less than 50 percent New Zealand content by value.
trade deficit	When the value of imports is more than the value of exports.
trade surplus	When the value of exports is more than the value of imports.
vfd	Value for duty (the value of imports before insurance and freight costs are added).

Data source

Data is obtained from export and import entry documents lodged with the New Zealand Customs Service (NZCS). The data is processed and passed to Statistics NZ for further editing and compilation.

Impact of the Christchurch earthquake on 22 February 2011

The Christchurch earthquake on 22 February 2011 resulted in the displacement of the staff who compile overseas merchandise trade statistics. A limited staffing arrangement was temporarily put in place, resulting in less editing of the February and March 2011 data than usual. Additional checking has been undertaken since then, resulting in no significant revision to the data for those months.

Valuations

Exports (including re-exports) are valued fob (free on board) and are shown in New Zealand dollars. Estimated values are used for goods that are not already sold at the time of export entry lodgement.

Imports are valued at cif (cost including insurance and freight) and are shown in New Zealand dollars.

Trade balance values are calculated by deducting imports (cif) from exports (fob). These two valuations are not entirely comparable, because the cif valuation includes insurance and freight to New Zealand while the fob valuation excludes insurance and freight from New Zealand. However, imports in tables 1 and 2 are also shown at the vfd (value for duty) level, which excludes the insurance and freight component.

Exchange rates

Export values given in foreign currencies are converted by Statistics NZ into New Zealand dollars, using weekly exchange rates when the statistics are compiled. For exports, a rise in the New Zealand dollar has a downward influence on prices, quantities, and values.

Import values are converted from foreign currencies when import documents are processed by NZCS. The exchange rates used are set by NZCS each fortnight. These rates are prepared 11 days before the start of the fortnight, so have a lag of 11 to 25 days compared with the daily rates published by the Reserve Bank. For imports, a rise in the New Zealand dollar has a downward influence on prices and an upward influence on quantities. The combined influence on values can be either positive or negative.

Time of recording

Exports

From the August 1997 reference month, exports are compiled by date of export. Previously, exports were generally compiled according to date of clearance by NZCS. This meant that some goods were allocated to the month following their actual month of export. Exports up to July 1997 that were not processed until August 1997 were assigned to the month of August 1997.

From 1 March 2004, NZCS has not allowed goods to be loaded for export until an export entry has been lodged and cleared. A study undertaken in 2001/02 indicated that export entries not being lodged might account for between 1 and 3 percent of exports at that time. There is a possibility that the change in NZCS processes may have reduced this undercoverage, although this has not been quantified.

Imports

Imports are generally compiled by date of entry clearance by NZCS. NZCS entries are required from up to five days before, to 20 working days after, arrival of goods into New Zealand. The exception to this rule is for crude oil imports, which can have entries lodged later than 20 working days after entry into New Zealand.

Crude oil values for the latest month are estimated using actual quantities and country of origin data (provided by NZCS, based on information from the refinery at Marsden Point), together with estimated prices. These estimates for crude oil are replaced once actual entries are lodged with NZCS.

While all entries are provisional for the latest three months, and have the potential to be changed by the importer/exporter within this period, changes are not common, and generally do not have a material impact on the results. However, New Zealand has only a few ships carrying crude oil arriving each month, and each ship represents a high proportion of the monthly total of imported crude oil. Any variation in the data for crude oil resulting from a later lodgement date can result in

a significant revision to the value. Once actual lodgements are received by Statistics NZ from NZCS, the value for crude oil can be regarded as robust.

There were 21 working days in July 2011, compared with 22 working days in July 2010.

Commodity classification

Commodities are classified according to the New Zealand Harmonised System Classification (NZHSC).

The NZHSC was revised from the January 2007 reference month, to incorporate changes promulgated by the World Customs Organization. Details can be found in the *Overseas Merchandise Trade: January 2007* information release published on 26 February 2007.

Standard International Trade Classification

The Standard International Trade Classification (SITC) is an output classification (using Harmonised System (HS) codes at the six-digit level as building blocks), designed by the United Nations as an analytical tool for economic analysis, which includes some simple implications regarding level of processing. Published figures are at a high level of aggregation; more disaggregated information is available on [Infoshare](#). For customised jobs using the SITC Rev 4 classification, contact customer services at: info@stats.govt.nz.

Broad economic category groups

Broad economic category (BEC) groups are arranged, as far as practicable, to align with the System of National Accounts' three basic classes: capital goods, intermediate goods, and consumption goods. Commodities in BEC groups are categorised on the basis of their main end use. This means, for example, that all video recorders are treated as consumption goods even though some are used in business. Similarly, all helicopters are treated as transport equipment even though some are military goods (and are treated as such in the National Accounts).

Trend series

Time series can be split into trend, seasonal, and irregular components. Seasonal adjustment removes the seasonal component, while trend estimation removes the seasonal and irregular components. Trend estimates reveal the underlying direction of movement in a series and are used to identify turning points.

The trend series are calculated using X-12-ARIMA, which adjusts for outlying values and uses a centred moving average. The length of the centred moving average is selected automatically and can be 9, 13, or 23 months, depending on the relative variability of the irregular component compared with the trend. A long moving average has the effect of smoothing the trend series but slowing the response to underlying changes in growth rates, while a short moving average produces a trend series that is less smooth but quicker to identify turning points.

To improve estimation of the underlying movement, the imports trend is calculated after removal of individual import items that have cif values of \$100 million or more, such as large aircraft and ships. The trade balance trend is calculated by subtracting the imports trend from the exports trend.

Trend figures are recalculated each month. The use of new monthly data means that previously published trend estimates are subject to revision. These revisions mainly affect the latest months, and can be large if a trade value is initially treated as an outlier but is later found to be part of the underlying trend.

Seasonally adjusted series

These are calculated monthly and for calendar quarters, using X-12-ARIMA.

Seasonal adjustment removes the estimated impact of regular seasonal events, such as pre-Christmas purchasing, from time series. This makes the figures for adjacent periods more comparable. Seasonally adjusted figures are estimates and are subject to revision each period, with the largest changes generally occurring in the latest periods.

Further information is on the [Statistics NZ website](#).

Confidential items

Under Section 37A (d) of the Statistics Act, the Government Statistician may disclose details of external trade, movement of ships, and cargo handled at ports. However, Statistics NZ understands that the release of merchandise trade commodity information can, in some cases, place commercially sensitive information in the public domain. Statistics NZ is able to provide a limited form of confidential status for commodity items (at the discretion of the Government Statistician), upon application by a company or business.

In practice, all confidential HS codes are aggregated into the code 9809.00.00.00 in order to protect their confidentiality and to maintain total export and import values. Any aggregations of HS codes below this level, which encompass confidential 10-digit codes, exclude the confidential value(s) for these codes.

The only aggregates that include the confidential codes are total exports, total imports, and the total exports and imports by country.

Concepts

Overseas Merchandise Trade (OMT) statistics are compiled in close accordance with the United Nations' International Merchandise Trade Statistics Concepts and Definitions. OMT data, after adjustment, is used in the Balance of Payments and National Accounts. The adjustments are for coverage, timing, valuation, and classification, and are explained in the [Balance of Payments – Sources and Methods 2004](#) publication.

1. Exports are valued fob (free on board – the value of goods at New Zealand ports before export) and include re-exports. Imports are valued cif (cost, including insurance and freight to New Zealand) or vfd (value for duty – the value of imports before insurance and freight costs are added). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Individual import items with cif values of \$100 million or more (such as large aircraft and ships).

1. Exports are valued fob (free on board – the value of goods at New Zealand ports before export) and include re-exports, while imports are valued cif (cost, including insurance and freight to New Zealand). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Values, particularly for the latest periods, are subject to revision each month.

4. Seasonally adjusted values exclude estimated seasonal fluctuations.

5. Trend values exclude estimated seasonal fluctuations and short-term irregular movements.

6. Excludes individual import items with (cif) values of \$100 million or more (such as large aircraft and ships).

1. Imports are valued cif (cost, including insurance and freight to New Zealand, in New Zealand dollars).

2. Figures are calculated on unrounded data.

3. Some section values exclude confidential data. (This may affect percentage changes.)

4. Excludes passenger motor cars. (There is a separate series for these because industry and household purchases cannot be split.)

5. Excludes petrol and avgas. (There is a separate series for these because industry and household purchases cannot be split.)

6. For the latest month, values for crude oil and some other petroleum products are calculated from estimated prices.

7. Excludes passenger motor cars, petrol and avgas, and military equipment.

8. Military equipment (including frigates), confidential, miscellaneous, and unclassified goods. Military helicopters are in capital transport equipment.

9. Data that is no longer confidential is assigned to specific BEC groups.

10. Totals may not match merchandise trade totals as some commodities (eg monetary gold) are excluded from BEC.

11. The change from the same period of the previous year.

1. Sourced from Ministry of Agriculture and Forestry.

2. Sourced from New Zealand Transport Agency.

3. This price may fluctuate with changes in sources of supply and types of crude oil being imported. Prices are estimated for the latest month.

4. Imports are valued cif (cost, including insurance and freight to New Zealand).

5. Figures are calculated on unrounded data.

HS – New Zealand Harmonised System Classification. (HS2007 applies to January 2007 and later data. HS2002 is used for earlier data.)

1. Exports are valued fob (free on board – the value of goods at New Zealand ports before export) and include re-exports, while imports are valued cif (cost, including insurance and freight to New Zealand). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Some section values exclude confidential data. All excluded confidential data is included in section 9 (other).

4. These codes are used in Infoshare series EXPM.SITC1& and IMPM.SITC1& (at position '&') for exports and imports data. No series for balance data.

5. For the latest month, values for crude oil and some other petroleum products are calculated from estimated prices.

6. Commodities and transactions not classified elsewhere in SITC.

7. Totals may not match merchandise trade totals as some commodities (eg monetary gold) are excluded from SITC.

8. Excluding food and fuel manufactures.

1. Seasonally adjusted quantities exclude estimated seasonal fluctuations, but include short-term irregular movements.

2. Seasonally adjusted quantities particularly for the latest periods, are subject to revision each quarter. Re-exports are included.

3. This quantity series is not directly comparable to the equivalent value series in table 11. See 'HS codes' in the tables for differences.

4. This series is not seasonally adjusted. This is because it does not have stable seasonality. Statistics for the latest three months are provisional.

5. There is no single, consistent, unit of quantity available for this category.

1. Values, particularly for the latest periods, are subject to revision each month.

2. Trend values exclude estimated seasonal fluctuations and short-term irregular movements.

3. This quantity series is not directly comparable to the equivalent value series in table 14. See 'HS codes' in the tables for differences.

4. Trend estimates are not calculated for this series because it does not have stable seasonality. Statistics for the latest three months are provisional.

5. There is no single, consistent, unit of quantity available for this category.

1. Imports are valued cif (cost, including insurance and freight to New Zealand). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Values, particularly for the latest periods, are subject to revision each month.

4. Trend values exclude estimated seasonal fluctuations and short-term irregular movements.

5. Trend estimates are not calculated for this series because it does not have stable seasonality. Statistics for the latest three months are provisional.

6. Excludes individual import items with (cif) values of \$100 million or more (such as large aircraft and ships).
